01 Overview

Every year, women build remarkable companies in crypto and AI. Far fewer of them get funded. The reason is rarely the quality of the idea. It is access: to the networks that make introductions, to investors who understand the problem being solved, and to the rooms where funding decisions are made.

ElleCoin exists to change that. We are building an ecosystem that discovers, evaluates and funds female-led innovation, and that gives a global community a direct voice in which founders are backed. It brings together three things that have rarely sat side by side: artificial intelligence that evaluates every founder consistently, a fund dedicated entirely to female-led startups, and on-chain governance that lets the community decide where that fund goes.

Three connected pieces make this possible:

- **ElleAI**, an AI agent that evaluates founder pitch decks and gives every founder a fast, consistent, data-informed read on her project.
- **The Women Investment Fund**, which commits 100% of its treasury to female-led blockchain and tech startups, with the community voting on which founders it backs.
- **ElleInvest**, an upcoming AI-powered investment platform that brings accessible investment tools to the wider community.

At the center is the **$ELLECOIN** token. Holding or earning it makes someone part of the ElleCoin community, with a vote on the Women Investment Fund, access to ElleAI and ElleInvest, and a place in a network committed to seeing women lead in Web3.

This whitepaper explains why ElleCoin exists, how each part of the ecosystem works, how the token is structured and launched, and how the community will govern the Fund as it grows. It is written for founders, community members, partners and anyone new to Web3 who wants to understand what we are building and why.

100% of the Women Investment Fund goes to female-led founders. The community decides who.

02 The Opportunity

The decentralized economy was meant to open finance up to everyone. In many ways it has: anyone with a wallet can hold digital assets, join a community or vote on a protocol's future. But the capital that builds

the next generation of Web3 companies still flows through a narrow set of hands, and women founders remain outside most of it.

27%	~4x	6%
of employees at top Web3 startups are women	more capital raised by men-founded Web3 startups than women-founded	of funding secured by female-led startups, Q1 2022 to Q3 2023

Sources: BCG X, "Web3 Already Has a Gender Diversity Problem" (2023); Bitget (2024).

This is not a gap in talent or ambition. It is a gap in access, and it shows up in three places:

Networks: Who Gets Introduced: Early-stage funding still runs largely on warm introductions. A founder who is not already connected to the right investors often never gets the first meeting, however strong her project.

Evaluation: Who Gets an Honest Read: Most founders who are turned down never learn why. Without clear, consistent feedback, it is hard to improve, and easy for bias to go unexamined.

Decisions: Who Gets a Vote: A small number of people decide which projects are funded. The broader community that wants to see women succeed, and that will use what they build, rarely has any say.

Why now

Two shifts make a different model possible today. AI can now read and assess a pitch deck in minutes, giving every founder the same structured evaluation regardless of who she knows. And blockchain governance lets a distributed community make funding decisions in the open, with every vote and every release recorded on-chain.

ElleCoin combines the two to address each barrier directly: a transparent evaluation layer for every founder, a fund committed entirely to female-led projects, and a community with a real vote in where that capital goes.

03 Mission & Pillars

> **OUR MISSION**
> To discover, evaluate and fund the next generation of female-led innovation in crypto and AI, and to give the community a direct voice in how that happens.

Our vision is a Web3 ecosystem where a woman with a strong idea can get an honest evaluation, find a community that backs her, and access capital on the strength of her project, not her network. Six pillars guide how we get there.

Discovery: Finding Founders Where They Are: ElleCoin actively seeks out female founders building in Web3, AI and emerging technology, through our community, partner organizations and an open pitch submission any founder can use. No warm introduction is required.

Evaluation: A Fair Read for Every Founder: Through ElleAI, every founder who submits receives a structured evaluation against the same published criteria. Founders gain feedback they can act on, and the community gains a clear view of each project's strengths.

Funding: Capital Committed to Women: The Women Investment Fund commits 100% of its treasury to female-led startups. It is never used to cover operating costs, and every release is recorded on-chain.

Community: Decisions Made Together: ElleCoin holders vote on which founders the Fund backs. Quadratic voting keeps that voice broad, so the community as a whole, not a handful of large wallets, shapes the outcome.

Education: Knowledge as the Foundation: We believe knowledge is the cornerstone of empowerment. ElleCoin explains how things work in plain language, so that founders, first-time token holders and experienced builders can all take part with confidence.

Safety: A Space Women Can Trust: Crypto can be unwelcoming and risky, especially for newcomers. ElleCoin is committed to a well-moderated community, official announcements through verified channels only, and security practices that protect members and the Fund.

Principles

Five principles shape every decision we make, from product design to how the token is launched:

Principle	What it means in practice
Community-first	Every holder has the same access to the presale, the same path to membership tiers and a protected voice in governance.
Transparent	Allocations, vesting, Fund decisions and Fund releases are published and verifiable on-chain.
Educational	We explain how things work rather than assuming prior crypto knowledge.
Inclusive	Built for women, and welcoming to everyone who wants to see female founders succeed.
Long-term	We prioritize steady, credible growth over short-term attention.

ElleCoin's mission is not simply to launch a token. It is to build lasting infrastructure that helps women raise capital, lead companies and shape the future of Web3, with a community standing behind them.

04 How ElleCoin Works

ElleCoin connects discovery, evaluation and funding into one transparent pipeline. Each component plays a distinct role, and together they form a cycle: founders come in, the community backs the strongest projects, and the Fund's proceeds are recycled to back the next generation.

Component	Role	Status
ElleAI	Evaluates founder pitch decks and surfaces high-potential, female-led projects	Live (MVP)
Women Investment Fund	Funds female-led startups selected by community vote	Launches after TGE
ElleInvest	AI-powered investment tools for the community	In development
$ELLECOIN	Governance and access token connecting the ecosystem	Pre-launch
Community	Votes on the Fund, earns membership tiers, sources founders	Growing on X and Telegram

A founder's journey

To see how the pieces fit together, consider an illustrative example: a founder building a decentralized savings app for underbanked communities.

She hears about ElleCoin through a women-in-Web3 community and uploads her pitch deck on the ElleCoin website. ElleAI returns a structured evaluation of her project across market potential, social sentiment and inclusive impact, with feedback she can use whatever happens next.

Her project scores strongly, so ElleAI surfaces it to the community alongside its evaluation. ElleCoin members discuss it in Telegram, ask questions and vote on Snapshot. The proposal passes, and funding is released from the Fund's multisig wallet, with the transaction published on-chain for anyone to verify.

Her opt-in founder profile now showcases her project to the community and potential partners, and she joins founder demo days to share her progress. If her project later returns value to the Fund, those proceeds are recycled into the next cohort of women-led projects.

Who ElleCoin is for

- **Female founders** building in Web3, AI and emerging tech who want an honest evaluation and a path to funding.
- **Community members** who want a real say in which women-led projects get backed.
- **Builders and contributors** who want to help grow the ecosystem and be recognized for it.
- **People new to Web3** looking for a welcoming, educational place to start.

05 ElleAI

Every founder deserves a fair hearing. ElleAI is ElleCoin's AI evaluation agent, built to give each founder a fast, structured and consistent assessment of her project, whether or not she has an investor network. It is live today as an MVP on the ElleCoin website.

ElleAI does not replace human judgment. It gives the community a common starting point. Every evaluation uses the same published criteria, so founders are assessed on the substance of their work, and members can compare projects on equal terms before they vote.

ElleAI has two jobs: it evaluates every submission, and it surfaces the strongest ones to the community. It provides information only. It does not trade, manage or move capital.

Evaluation criteria

ElleAI assesses each project across three criteria:

Criterion	What ElleAI looks at
Market Potential	Market data and whether the project solves a clear, specific problem for a real audience
Social Sentiment	How the market and community are responding to the project and its category
Inclusive Impact	How the project can benefit different cultures, backgrounds and underrepresented groups

Inclusive Impact is what sets ElleAI apart from conventional pitch screening. Beyond asking whether a project can grow, it asks who the project serves and whether it opens opportunities for people who have historically been left out.

How it works

1. The founder uploads her pitch deck through the ElleCoin website.
2. ElleAI scores the project across Market Potential, Social Sentiment and Inclusive Impact.
3. The founder receives her evaluation, with feedback she can use whether or not she seeks funding.
4. ElleAI ranks submissions and surfaces the highest-scoring projects to the community for review and a potential Fund vote.

Founder profiles

Founders can opt in to a public profile that showcases their project and evaluation. Founders gain visibility with the community and potential partners, and the community gets a living view of the pipeline the Fund draws from.

What's next for ElleAI

Planned upgrades include gamification and a public leaderboard of surfaced projects, deeper evaluation reports for community members, and an open scoring rubric published on GitHub so founders can see exactly how they are evaluated.

> **ELLEAI EVALUATES. THE COMMUNITY DECIDES.**
> ElleAI provides information only. It does not trade, move or allocate capital. It surfaces the strongest projects, the community reviews them and votes, and approved funding is released from the Fund's multisig wallet.

06 The Women Investment Fund

The Women Investment Fund is the heart of ElleCoin and the clearest expression of why it exists. **100% of the Fund's treasury is committed to female-led blockchain and tech startups.** It is not used for operations, liquidity or unrelated investments, and every release is decided by the community and recorded on-chain.

The Fund is designed to be both purposeful and sustainable. Capital is deployed steadily over time, protected by multisig custody and a quarterly release cap. When Fund-backed projects return value, those proceeds are recycled into new women-led projects, so each founder the community backs helps make room for the next.

Who can be funded

Any project with **at least one female founder**, building in areas including:

Sectors
Decentralized applications • AI • Infrastructure • DeFi • DAOs • Gamification and NFTs • Metaverse

From pitch to funding

1. The founder submits her pitch deck through ElleAI.
2. ElleAI evaluates the project on Market Potential, Social Sentiment and Inclusive Impact.
3. ElleAI surfaces the highest-scoring projects to the community with their evaluations.
4. The community votes on Snapshot.
5. Approved funding is released from the Fund's multisig wallet and published on-chain.

Safeguards

Multisig Custody: The Fund is held in a multisig wallet that requires several signers for every transaction, so no single person can move it.

Quarterly Release Cap: No more than 10% of the Fund allocation can be released in a single quarter, so capital is deployed steadily over time rather than all at once.

Public Reporting: Regular Fund transparency reports cover which projects were backed, how much was released and how they are progressing.

How Fund proceeds are used

When a Fund-backed project returns value, proceeds are recycled into new women-led projects. The community votes on how the remainder is used, which can include holder and contributor rewards. Any distribution is a community decision, never a promise.

Once ElleInvest launches, the community may vote to place a share of what the Fund earns back in broader digital assets. This comes from returns only. The Fund's original capital always stays with female-led founders.

07 ElleInvest

ElleAI helps the community decide which founders to back. ElleInvest is the next step: an AI-powered investment platform that brings thoughtful, accessible investment tools to the ElleCoin community.

Many people, and many women in particular, have been told that investing is complicated and not for them. ElleInvest is being built to change that experience, with clear explanations, data-driven insights and tools that adapt to each person's preferences and experience level.

Feature	Description
Predictive analytics	AI-driven insights into market trends and project fundamentals
Automated portfolios	Portfolio tools that adapt to each user's risk preferences
Real-time insights	Clear, plain-language market information for every experience level

ElleInvest opens first to Champion and Patron members (see Community Membership), then to the wider public.

08 Designed for Everyone

A platform built to widen access cannot be built only for experts. Since ElleCoin's earliest vision, accessibility for people without a technical background has been a core commitment, and it shapes everything we build.

Plain Language: Complex concepts are explained clearly and without jargon across our products, documentation and community channels.

Guided Steps: Key actions, such as submitting a pitch deck, joining the presale or casting a vote, come with step-by-step guidance for first-timers.

Visual Clarity: Evaluations, Fund activity and governance results are presented with clear visuals, so members can understand them at a glance without analyzing raw data.

Low Cost to Participate: Building on BNB Smart Chain keeps transaction costs low, so voting and participation stay affordable for every member.

A Supportive Community: Moderated channels, welcoming onboarding and peer support mean no one has to figure things out alone.

By pairing AI with a community-first, plain-language experience, ElleCoin makes it possible for women of every background to take part in funding the next generation of founders, whatever their technical experience.

09 The Landscape

ElleCoin enters a landscape with many organizations working to support women and to fund Web3 innovation. Each plays an important role. ElleCoin is designed to complement them by bringing together pieces that have usually been separate.

Women-in-Web3 Communities and Education Programs: These offer learning, networking and visibility for women entering the industry. They build confidence and connection, but rarely provide capital directly. ElleCoin sees these communities as natural partners and a vital source of founders.

Venture Funds and Angel Networks: These provide capital, but decisions are made privately by a small group, and access often depends on existing relationships.

Launchpads and Token Platforms: These help projects raise funds from the public, but are open to any project and are not built around female founders or community-led selection.

Diversity Advocacy Initiatives: These raise awareness of the gender gap and push for change across the industry, but typically focus on advocacy rather than funding.

What ElleCoin brings together

Capability	How ElleCoin delivers it
Dedicated to female founders	Every Fund investment goes to a project with at least one female founder
Capital, not just connection	100% of the Women Investment Fund is committed to female-led startups
A fair read for every founder	ElleAI evaluates every submission against the same published criteria
Community-led decisions	Holders vote on which founders are funded, with quadratic voting
Transparency	Allocations, votes and Fund releases are verifiable on-chain

ElleCoin's distinction lies in this combination: education and community, structured evaluation, dedicated capital and open governance in one ecosystem, all focused on helping women build and lead.

10 The $ELLECOIN Token

$ELLECOIN is what turns the ElleCoin community from an audience into a decision-maker. It is the governance and access token of the ecosystem, giving holders a direct voice in how the Women Investment Fund is deployed and opening access to ElleAI, ElleInvest and the community's programs.

The token is designed around participation. What it offers holders is what it lets them do: vote, access tools, join programs and help shape which women-led projects receive funding.

Attribute	Detail
Name / Ticker	ElleCoin / $ELLECOIN
Chain	BNB Smart Chain (BEP-20)
Total supply	25,000,000, fixed. No minting after launch.
Launch model	Single community presale: same price for everyone, low per-wallet caps, no private or discounted rounds
Governance	Community voting on Snapshot, with quadratic voting

Token attributes

Fixed Supply: All 25,000,000 tokens are created at launch. No new tokens can ever be minted, and every allocation is published.

Equitable Launch: We are committed to fairness and equal opportunity. There are no seed, private or discounted rounds. Everyone in the community presale participates on the same terms, at the same price, regardless of the size of their purchase.

Community Governance: Holders vote on the decisions that matter most, starting with which founders the Fund backs.

Transparent by Design: Allocations, vesting schedules, liquidity locks and Fund releases are all verifiable on-chain.

Utility

Holding $ELLECOIN unlocks a growing set of benefits across the ecosystem:

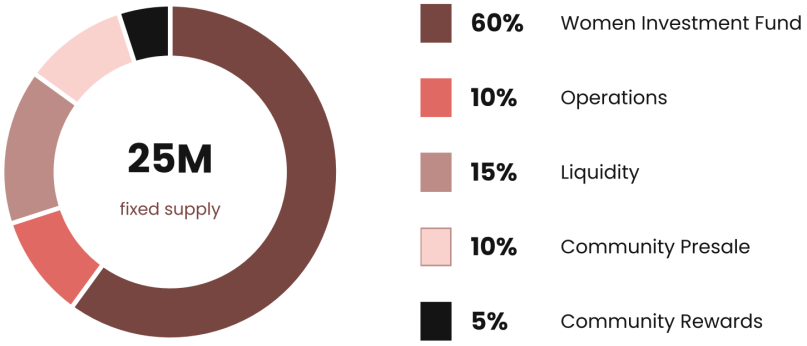

Utility	Description
Governance	Vote on which founders the Fund backs, quarterly Fund releases and the use of Fund proceeds
ElleAI access	Detailed evaluation reports and leaderboard features for members
ElleInvest access	Early and tiered access to ElleInvest tools and investment strategy education
Community membership	Holder-only channels, community calls, events and founder demo days
Priority participation	Priority access to community rounds of Fund-backed projects for Patron members

Together, these make $ELLECOIN a membership in a movement: a way to take part in funding female founders, learn alongside a supportive community and help shape ElleCoin's future.

11 Tokenomics

ElleCoin's tokenomics follow one rule: every token has a clear and public purpose. The majority of the supply, 60%, is dedicated to the Women Investment Fund. The remainder supports operations, launch liquidity, a fair community presale and long-term community rewards.

There are no allocations for private investors. Operations, including founder compensation, are funded from their own allocation and vest over time, keeping the team aligned with the community for the long term.

Allocation	Share	Tokens	Vesting and release
Women Investment Fund	60%	15,000,000	Held in a multisig wallet. Released only by community vote, capped at 10% of the allocation per quarter.
Operations	10%	2,500,000	10% of the allocation unlocked at TGE for audit and launch costs. Remainder: 6-month cliff, then 24 months linear.
Liquidity	15%	3,750,000	Paired at TGE with presale proceeds. Liquidity locked for a minimum of 12 months.
Community Presale	10%	2,500,000	25% unlocked at TGE, remainder released monthly over 6 months.
Community Rewards	5%	1,250,000	Released over 36 months through holder and contributor programs.

Treasury principles

- **100% of the Fund goes to female-led founders.** The Fund allocation is never used for operations, liquidity or other investments.
- **Operations are funded separately**, from their own 10% allocation. Founder compensation comes from this allocation and is disclosed publicly.
- **No investor allocations.** There are no seed, private or strategic rounds.
- **Time-based vesting only.** All schedules are fixed, published and verifiable on-chain.

12 Community Presale

A healthy launch needs liquidity, so that members can acquire and use $ELLECOIN from day one. Rather than raise that liquidity from private investors, ElleCoin will raise it from its own community, through a single presale designed for regular members rather than large buyers.

We believe a deliberate launch builds a stronger community than a fast one. That is why the presale will open only once clear, public conditions have been met, and why its structure favors breadth of participation over the size of any single purchase.

Principle	How it works
Same terms for everyone	One public round at one price. No seed, private or discounted rounds, and no early access for larger buyers.
Low per-wallet caps	Caps are set so the sale is spread across many people rather than a few wallets.
Proceeds fund liquidity	Presale funds are paired with the liquidity allocation at TGE and locked, so the community has a healthy market from day one.
Short, fair vesting	25% at TGE and the rest over 6 months.

Conditions before the presale opens

The presale opens only once every condition below has been met and publicly confirmed:

1. This whitepaper and the full tokenomics are published.
2. The token contract is audited, with the audit report public.
3. Vesting and liquidity locks are in place and verifiable.
4. ElleAI has evaluated an initial cohort of founder pitch decks.
5. The community has reached its pre-launch size milestone across X and Telegram.
6. A launch partner is confirmed, or a direct presale contract has been audited.

> **PRESALE DETAILS**
> Price, per-wallet caps, launch partner and dates will be announced through official ElleCoin channels once the conditions above are met. ElleCoin will never announce a sale through private messages.

13 Community Membership

The strongest communities reward commitment and contribution, not just wealth. ElleCoin membership is built on that idea. Members can reach each tier in two ways: by **holding** $ELLECOIN for at least 30 days, or by **contributing** to the community.

This means someone who cannot hold a large amount can still reach every tier through the work they put in, from bringing in founders to helping new members find their footing.

Tier	What it unlocks
Member	Voting on Fund decisions, holder-only Telegram channel, community calls and events, education content
Supporter	All Member benefits, plus detailed ElleAI evaluation reports, leaderboard features and the ElleInvest waitlist
Champion	All Supporter benefits, plus early ElleInvest access, investment strategy education and founder demo days
Patron	All Champion benefits, plus priority access to community rounds of Fund-backed projects, the right to submit governance proposals and private AMAs with funded founders

The contribution path

Funded from the Community Rewards allocation. Contributions that count toward tier progress include:

- Referring founders who submit a pitch deck through ElleAI.
- Moderating and onboarding new members in Telegram.
- Creating educational content or translations.
- Contributing to the ElleCoin GitHub: documentation, proposals and the ElleAI scoring rubric.

Holding thresholds for each tier will be published alongside presale details, so they reflect real-world cost and stay within reach of regular members.

14 Governance

A fund built to back women should be directed by the community that believes in them. ElleCoin's governance puts the most important decision, which founders receive funding, in the hands of its members.

Voting takes place on **Snapshot**, which is free to vote on, wallet-based and supports BNB Smart Chain. Discussion happens in Telegram, and formal proposals are tracked publicly on the ElleCoin GitHub.

Element	Approach
Voting weight	Quadratic voting: voting power grows more slowly than holdings, so the community's collective voice outweighs any single large holder.
Who can vote	All membership tiers
Who can propose	Patron members, or any member sponsored by a Patron
What is voted on	Which founders the Fund backs, quarterly Fund releases, use of Fund proceeds, community rewards programs and major ecosystem changes
Execution	Approved Fund releases are executed by the Fund multisig and published on-chain

Why quadratic voting

In standard token voting, one large wallet can outvote hundreds of members. Quadratic voting reduces that imbalance by basing voting power on the square root of a member's holdings.

Tokens held	Standard voting power	Quadratic voting power
100	100	10
10,000	10,000	100

Under quadratic voting, a holder with 100 times more tokens has 10 times the voting power, not 100 times. Decisions about which women-led projects get funded reflect the breadth of the community, not the size of a few holdings.

15 Technology & Security

Why BNB Smart Chain

ElleCoin is built on BNB Smart Chain, chosen for the qualities that matter most to a community-first project:

Transaction Costs: Low fees keep voting, presale participation and everyday use affordable for every member, not just those with large balances.

Speed: Fast confirmations create a smooth experience, especially for people taking their first steps in Web3.

Interoperability: EVM compatibility gives ElleCoin access to proven wallets, tools and audited contract standards.

Ecosystem Support: An established ecosystem of infrastructure providers, launch partners and users supports ElleCoin as it grows.

Scalability: The network can handle growing activity without congestion, so the community experience stays consistent as membership expands.

Security and transparency

Trust is earned through verifiable practice. Every core component of ElleCoin is built on established standards and open to inspection:

Component	Approach
Token contract	Standard fixed-supply BEP-20 built on audited open-source templates, with no mint function after deployment
Audit	Independent smart contract audit, with the report published before the presale
Vesting and liquidity locks	Established on-chain vesting and lock services, verifiable by anyone
Fund custody	Multisig wallet requiring multiple signers for every release
Identity verification	Founder identity verified privately with the launch partner
Open source	Public GitHub repository for documentation, governance proposals, the ElleAI scoring rubric and the audited contract

16 Roadmap

ElleCoin will grow in five phases, each building on the last. We are sequencing the work deliberately: the community and the tools come first, the token launches only once its conditions are met, and the Fund activates once governance is live. Timing will be shared through official channels as each milestone is confirmed.

Phase	Key milestones
01 Foundation	Website and community refresh; X and Telegram community growth; partnerships with women-in-Web3 communities; first founders evaluated through ElleAI
02 TGE Readiness	Whitepaper and tokenomics published; membership tiers published; token contract audited on BNB Smart Chain; launch partner confirmed; litepaper; GitHub live

Phase	Key milestones
03 Community Presale & TGE	Presale conditions met and sale opens; $ELLECOIN launches; liquidity locked; Snapshot governance opens
04 Fund Activation	First community vote on founders; first Women Investment Fund investments; first Fund transparency report; ElleAI founder profiles and leaderboards
05 ElleInvest	Early access for Champion and Patron members; public launch; community-approved diversification from Fund returns begins

17 Our Commitment

ElleCoin is more than a token. It is a commitment to change who gets funded in Web3, and who gets to decide. By combining AI evaluation, a fund dedicated entirely to female-led startups and open community governance, ElleCoin gives women founders a fairer path to capital, and gives everyone who believes in them a way to help.

We are building this deliberately and in the open: a fixed supply, an equitable launch, published allocations and every Fund decision recorded on-chain. We invite founders, builders, supporters and newcomers to join us.

Get involved

If you are...	Start here
A founder	Submit your pitch deck for an ElleAI evaluation at ellecoin.co
A supporter	Join the ElleCoin Telegram community and follow us on X
A builder or creator	Contribute on GitHub, help moderate or create educational content to earn your way through membership tiers

Your pitch deck, evaluated by AI. Funded by community.

18 Important Information

This whitepaper is provided for information only. It describes the ElleCoin ecosystem, the $ELLECOIN token and the plans of the ElleCoin project as of its publication date.

This document is not an offer to sell, or a solicitation of an offer to buy, any securities, investment products or financial instruments, and it does not constitute financial, investment, legal or tax advice. $ELLECOIN is a governance and access token for use within the ElleCoin ecosystem.

Plans, features, timelines and token parameters described here may change as the project develops. Any material changes will be communicated through official ElleCoin channels, and updated versions of this whitepaper will be published.

Participating in digital assets carries risk, including volatility, technical risk and changing regulation. Participants should do their own research, consider their own circumstances and comply with the laws of their jurisdiction.

ElleCoin will only communicate official announcements, including any presale details, through its website and official social channels. ElleCoin will never ask for your private keys or seed phrase.
